**The Hudson-Sharp Machine Company, now a part of Thiele Technologies,
to Promote Expanded Product Offerings at CPP/Pack Expo 2009**

GREEN BAY, WISCONSIN. — August 19, 2009 — The Hudson-Sharp Machine Company will present its expanding line of plastic bag, pouch machinery, and resealable packaging solutions at CPP/Pack Expo 2009, October 5 to 7, at the Las Vegas Convention Center in Nevada.

A team of professionals from The Hudson-Sharp Machine Company, now a part of Thiele Technologies, will be available in Booth #S-5649 to discuss the company's latest offerings and to help attendees identify the equipment needed to improve or expand their operations. A few of the products offered by The Hudson-Sharp Machine Company include:

- **Servo Pouch Machinery** – The Hudson-Sharp Machine Co.'s servo pouch machine combines a modular platform design with a wide variety of customizable options and features for value-added production of pre-made pouches in a variety of styles including: stand-up, 3 side seal, side-gusset bottom-seal, fold-over glued bottom and many more. Pouch styles can be produced using either string or flanged zipper.
- **Reclosable Packaging Solutions** – Hudson-Sharp's bag machinery can be custom engineered to integrate with a variety of reclosable packaging systems such as slider closure systems and press-to-close zipper applicators. Hudson-Sharp offers a wide range of versatile and innovative bag machinery with attachments and options to allow converters to produce a variety of reclosable bags and pouches. Applications include reclosable bags and pouches for end use markets such as lawn

Technologies

and garden, pet food and snacks, baked goods, deli, dairy, frozen foods and novelties, as well as candy and confectionary products.

Inno-Lok® pre-zippered roll stock is used in form-fill-seal machinery to produce value-added reclosable packaged products with higher production rates, less scrap, and no reduction in processing speeds. The latest opening style from the Inno-Lok® reclosable packaging family includes the innovative new Pour & Lok™. Pour & Lok™ is a side gusseted, reclosable package with a press-to-close zipper located in the side gusset. Once the top of the package is opened, the gusset can be pulled out to form a pour spout. The zipper can be extended beyond the gusset into the body of the bag to make a larger opening which will allow scooping or easy pouring of the product. The specially designed foldable zipper can then close the bag while the spout remains in the extended position.

- Hudson-Sharp's broad based product line also includes high speed wicketers, flat belts, bottomseal, rotary bag machinery and custom-designed machinery producing a wide variety of pre-made bags and pouches.

The Hudson-Sharp Machine Company has manufacturing and sales facilities in the U.S., Belgium, Brazil, Mexico, Australia and the Philippines. With 100 years of manufacturing, sales and service, Hudson-Sharp builds and markets a broad line of plastic bag machinery, pouch making equipment, and pre-zippered film systems used in a variety of industries.

About Thiele Technologies

Thiele Technologies, Inc. provides advanced high-speed automation solutions to a variety of industries around the globe, including petro-chemicals, fresh and frozen food, pet food, beverage, dairy, bakery, pharmaceutical, medical devices, cosmetics, horticultural, paper goods, consumer mailing and collating. With more than 80 years of service, Thiele leads the industry in the design, manufacture and integration of bagging, cartoning, placing/feeding, case packing and palletizing systems.
